In computing, extract, transform, load (ETL) is the general procedure of copying data from one or more sources into a destination system which represents the data differently from the source(s). The term comes from the three basic steps needed: extracting (selecting and exporting) data from the source, transforming the way the data is represented to the form expected by the destination, and ...

METHOD 552.2 DETERMINATION OF HALOACETIC ACIDS AND DALAPON

INTRODUCTION For many years, analysis of short chain fatty acids (volatile fatty acids, VFAs) has been routinely used in identification of anaerobic bacteria.

Myron Sasser Last Revised July 2006 - Fatty Acid Analysis

The developed method based on cellular fractionation and mass spectrometry allows researchers to determine the concentrations of antibiotics in bacterial compartments like the cytoplasm or the periplasm.

Analytical Chemistry (ACS Publications)

We study a new channel of downstream rent extraction through vertical integration: competition for integration. Innovative downstream firms create value and profit opportunities through product differentiation, which however affects an upstream monopolist's incentive to vertically integrate.

Vertical integration and product differentiation

Social network analysis (SNA) is the process of investigating social structures through the use of networks and graph theory. It characterizes networked structures in terms of nodes (individual actors, people, or things within the network) and the ties, edges, or links (relationships or interactions) that connect them. Examples of social structures commonly visualized through social network ...
