Aesthetic aspects. In its simplest aesthetic meaning, wood grain is the alternating regions of relatively darker and lighter wood resulting from the differing growth parameters occurring in different seasons (i.e., growth rings) on a cut or split piece of wood. Causes including fungus, burls, stress, knots, special grain alignments, and others produce figure in wood.

**Wood grain - Wikipedia**

A transformer is a static electrical device that transfers electrical energy between two or more circuits. A varying current in one coil of the transformer produces a varying magnetic flux, which, in turn, induces a varying electromotive force across a second coil wound around the same core. Electrical energy can be transferred between the two coils, without a metallic connection between the ...
