produces a time-varying magnetic field inside the coil . Moving a magnet towards a coil produces a time-varying magnetic field inside the coil The induced emf in a coil of N turns is equal to N times the rate of change of the magnetic flux on one loop of the coil.

6.007 Lecture 11: Magnetic circuits and transformers

Power transformers are used in power generation, transmission and distribution systems to raise or lower the level of voltage to the desired levels. The basic principle of operation of both types of transformers is the same. In this chapter, we will first review some of the basic concepts of magnetic circuits, which are fundamental
