I don't know if it is the way, but it is an approach I often propose on Quora. Following this method will allow you to learn programming principles using the Python language rather than just learn Python as a programming language.. This is an important distinction because in programming it is the fundamentals that are important.

`context_processors` is a list of dotted Python paths to callables that are used to populate the context when a template is rendered with a request. These callables take a request object as their argument and return a dict of items to be merged into the context.. It defaults to an empty list. See `RequestContext` for more information.. `debug` is a boolean that turns on/off template debug mode.

In this step-by-step Seaborn tutorial, you'll learn how to use one of Python's most convenient libraries for data visualization. For those who've tinkered with Matplotlib before, you may have wondered, "why does it take me 10 lines of code just to make a decent-looking histogram?" Well, if you're looking for a simpler way to plot attractive charts, then [
