A T-beam (or tee beam), used in construction, is a load-bearing structure of reinforced concrete, wood or metal, with a t-shaped cross section. The top of the t-shaped cross section serves as a flange or compression member in resisting compressive stresses. The web (vertical section) of the beam below the compression flange serves to resist shear stress and to provide greater separation for the ...

Carbon fiber reinforced polymer, carbon fiber reinforced plastic, or carbon fiber reinforced thermoplastic (CFRP, CRP, CFRTP, or often simply carbon fiber, carbon composite, or even carbon), is an extremely strong and light fiber-reinforced plastic which contains carbon fibers. The alternative spelling 'fibre' is common in British Commonwealth countries.

TP14 is broken into 2 parts (TP14- 1 and TP14-2) but aims to cover how retaining walls cope with different loading types. TP14-1 provides a comparison of the structural reliability of retaining walls designed to AS4678

to walls created using different codes, in particular, the British Code of practice CP2 and the National Concrete Masonry Association (USA) method of designing reinforced soils.
