In a microwave beam directed at an angle into the sky, a small amount of the power will be randomly scattered as the beam passes through the troposphere. A sensitive receiver beyond the horizon with a high gain antenna focused on that area of the troposphere can pick up the signal.

Microwave - Wikipedia

A radio frequency (RF) resonant cavity thruster, also known as an EmDrive, is a hypothesized type of propellant-free thruster that was proposed in 2001 by Roger Shawyer. No plausible theory of operation for such drives has been proposed; the theories that were proposed were shown to be inconsistent with known laws of physics, including conservation of momentum and conservation of energy.
